

Backup Systems for Virtual Environments

Reduce Backup and Recovery Time (and costs!)

Tier3 Technologies Backup & Recovery System Built Especially for Virtual Environments

Today's companies understand the need to rapidly re-deploy when faced with a disaster recovery situation. But so many traditional backup & recovery solutions require slow, tedious backups that require expensive hardware and hours of network bandwidth use and system downtimes.

When companies enter into a Virtual Environment, they have already experienced the low TCO and rapid ROI realized from leveraging that technology. But when disaster hits – are they leveraging what they already own, or are they settling for slower, more traditional systems?

The Tier3 system is purpose-built for VMware. Our solutions are unique because they leverage the power of virtualization to backup virtualization. Built on a Virtual Backup Appliance Architecture, our Virtual Backup doesn't require separate physical backup/proxy servers, additional software or agents like alternative solutions.

Safer and Cost Effective

Tier3 Virtual Backup provides higher ROI and lower TCO than alternative solutions because it provides optimized backup without requiring additional servers, software or hardware. With built-in source-side deduplication, Tier3 Virtual Backup dramatically reduces backup storage requirements and costs while optimizing network based backups, reducing bandwidth requirements and costs:

Flexible Host Based Licensing – Simply license each virtualization host. There is no complex pricing or hidden increase in costs based on the number of sockets in your servers or the number of virtual machines you have deployed in your environment.

No Backup Servers or Proxies – Deployed as a virtual appliance, there is no additional cost to acquire and deploy more physical servers.

No Additional Software or Hardware – Our solution eliminates the need to acquire operating systems, agent software or additional hardware adapters required by many other backup and recovery solutions.

Built-in Deduplication – Backup storage is dramatically reduced and optimized leveraging our deduplication technology. Our customers regularly achieve a 25:1 deduplication ratio, reducing on-going backup storage needs by 96% and increasing backup and recovery speeds by as much as 75%.

Call Tier3 today and find out how you can save time and money while deploying a safe, secure backup and recovery system. At Tier3 Technologies, we save companies money on IT – period.
