

## NetTools Network Performance Assessment

**Rapidly assess your network's readiness for VoIP, new applications and infrastructure**

*Proactively troubleshoot network and application performance issues with hop-by-hop analyses from the source to remote sites*

**Monitor network performance, Quality of Experience and Service Level Agreements**

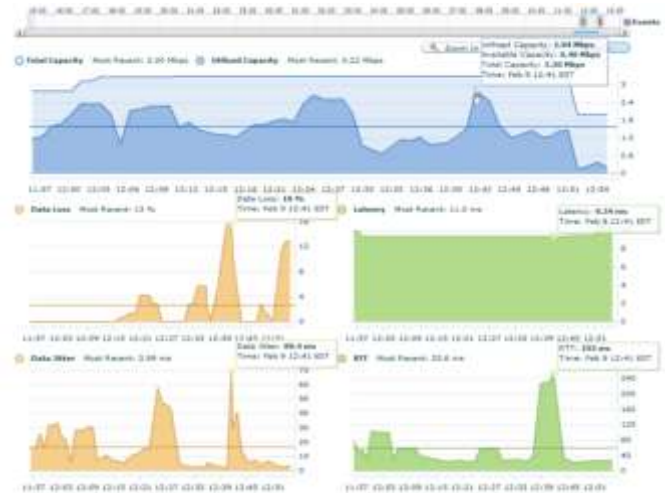

*Tracks carrier performance with measurements such as bandwidth, jitter, latency and packet loss*

*Deploys in minutes with cloud-based architecture and zero administration appliances*

It is critical to test and assess your network prior to making infrastructure changes or rolling out new applications. Projects like adding new locations, transitioning to an MPLS network, or deploying new applications like VoIP involve operational risks and you must assure the deployment is error-free.

Organizations often underestimate the task of network assurance prior to deploying a performance sensitive application such as VoIP, VDI and video conferencing to remote locations. A mean opinion score [MOS] and loss measurements are not enough to determine call quality and network capability, nor do they take into consideration the varying conditions of network traffic.

Tier3 Technologies NetTools Network Performance Assessment can provide you the information you need in a matter of hours.

**“Many customers looking to implement a VoIP solution for the first time have absolutely no idea how critical a clean data path is to its usability. We use this technology to get an in-depth look at a customer’s network health. It’s like an MRI for their IT departments.”**

- Eric Knaus, President of RonEK Communications

### The security of a predictable outcome

- Our technicians install our non-intrusive appliance at your facility in a matter of minutes
- It starts testing your network status-quo right away
- It generates synthetic VOIP traffic loads at peak times and tells you how your network handles it
- Within hours you receive a certified, easy-to-read, graphical report with the results of your tests

**“75% of enterprises that do not perform a pre-implementation analysis of their IP network will not achieve a successful VoIP implementation.”**

- Gartner, Inc.

Don't be part of that 75%! Call Tier3 today and find out how you can achieve the security of a predictable outcome.
