1 Introduction

1.1 Overview

This document contains the January 2007 Server Monitoring Reports for First Finance International, prepared by Acme IT Services.

1.2 All Sites

The Backup Check chart shows the success or otherwise of the Backup Check for the month of January 2007 on all First Finance International servers for which Server Monitoring Reports have been configured. Servers are grouped by product to enable comparison of different products. A green tick indicates that the Backup Check passed on that day. A red cross indicates that the Backup Check failed on that day. A transparent tick indicates that the Backup Check is not configured to run on that day.

The Anti-virus Update Check chart shows the success or otherwise of the Anti-virus Update Check for the month of January 2007 on all First Finance International servers for which Server Monitoring Reports have been configured. Servers are grouped by product to enable comparison of different products. A green tick indicates that the Anti-virus Update Check passed on that day. A red cross indicates that the Anti-virus Update Check failed on that day. A transparent tick indicates that the Anti-virus Update Check is not configured to run on that day.

1.3 Percentage Good Analysis

The Percentage Good Analysis graphs show the percentage of time that the 24x7 Checks or Daily Safety Checks were good (if the check passed or the server was put into maintenance mode) for a given server. Green indicates that the check was 100% good in January 2007. Yellow indicates that the check was more than 75% good. Red indicates that the check was less than 75% good.

1.4 Outage Analysis

The Outage Analysis graphs show a breakdown of the 24x7 Check or Daily Safety Check Outages on the given server in January 2007 and how this compares to the trend for the preceding 12 months. Please note that consecutive check failures are treated as a single outage.

1.5 Disk Drive Growth

The Disk Drive Growth graphs show the disk usage growth on the monitored disk drives in the given server for the two months preceding January 2007 at daily frequency, the year preceding January 2007 at weekly frequency and the five years preceding January 2007 at monthly frequency (assuming sufficient data exists). The orange line indicates the size that has been configured to generate an alert should usage on the monitored disk exceed this.

1.6 Exchange Store Growth

The Exchange Store Growth graphs show the growth of the Microsoft Exchange Public Store on the given server for the two months preceding January 2007 at daily frequency, the year preceding January 2007 at weekly frequency and the five years preceding January 2007 at monthly frequency (assuming sufficient data exists). The orange line indicates the size that has been configured to generate an alert should the Exchange Public Store exceed this.
